This tools is a simple wrapper around Last.FM API that allows you to export user's listening history to a SQLite database.

**CHAPTER
ONE**

INSTALLATION

To use this library:

```
pip install lastfm-to-sqlite
```

To contribute to this library, first checkout the code. Then create a new virtual environment:

```
git https://github.com/hp0404/lastfm-to-sqlite.git
cd lastfm-to-sqlite
python -m venv venv
source venv/bin/activate
```

Or if you are using *pipenv*:

```
pipenv shell
```

Now install the dependencies and tests:

```
pip install -r requirements.txt
```

To run the tests:

```
pytest
```

USAGE

Before using `lastfm` you'll need to get an access token from `last.fm`. See <https://www.last.fm/api>

Both Python and CLI API have the same functionality: they allow you to export user's playlist history to a SQLite database.

The arguments you should familiarize yourself with are `--user`, `--start_date` and `--end_date`.

2.1 Python API

To use Python API

```
from lastfm.export import get_users_recent_tracks

# playlist is a generator containing all tracks for a given date
playlist = get_users_recent_tracks(
    api="244ec3b62b2501514191234eed07c75d"
    user="way4music",
    start_date="2021-08-15",
    end_date="2021-09-01")
```

This allows you to work with a trimmed JSON directly.

2.2 Click API

To run script as a command-line tool, use CLI functionality that explicitly uses database to store data

```
lastfm export 244ec3b62b2501514191234eed07c75d lastfm_dump.db --user Way4Music
```

That will use (or create) a SQLite database called `lastfm_dump.db` and a table called `playlist` to export user's entire playlist.

To scrape specific dates, use `--start_date` and `--end_date`:

```
lastfm export 244ec3b62b2501514191234eed07c75d lastfm_dump.db --user way4music --start_
date 2020-10-01 --end_date 2020-10-29
```

LASTFM

3.1 lastfm package

3.1.1 Submodules

3.1.2 lastfm.cli module

3.1.3 lastfm.export module

`lastfm.export.convert_to_timestamp(date)`

Convert human-readable *date* as either `datetime.date` or `str` to Unix Timestamp.

`lastfm.export.export_page(page)`

Scrape specific information regarding each song in a playlist.

`lastfm.export.fetch(session, params, meta)`

Fetch each page and export data using `export_page`.

`lastfm.export.get_metadata(page)`

Access requests' metadata containing total number of pages.

`lastfm.export.get_users_recent_tracks(user: str, api: str, first_page: int = 1, limit_per_page: int = 200, extended: int = 0, start_date=None, end_date=None)`

Export user's track history given the parametrs.
